

NEWS RELEASE

Transition to an Operating Company, Capital Increase

Tokyo, Mar 2nd, 2026 - Satellite Data Service Co., Ltd. will transition into a fully operating business entity. Since its establishment, the company has built a foundation as a planning organization dedicated to pioneering the future of satellite data services. We are now pleased to announce the official commencement of operations as a business company.

To mark this new stage of growth, we have received additional investment from Mitsubishi Electric Corporation, MUFG Bank, Ltd., and Integrated Design & Engineering Holdings Co., Ltd. Furthermore, Kokusai Kogyo Co., Ltd. and Zenrin Co., Ltd. have newly joined as shareholders. Our company was originally founded by leading enterprises spanning the entire satellite data service value chain—from satellite development and operations to data analytics and consulting—and has steadily expanded its reach with the participation of financial institutions. With the addition of our new partners, we are now better positioned to deliver advanced solutions that address a broader range of needs. Going forward, we will further accelerate and deepen our initiatives through an “All Japan” framework.

Leveraging the power of satellite data, our company has been working to solve global-scale challenges: managing national land and infrastructure, enabling rapid situational awareness during disasters, addressing labor shortages, and providing objective evaluation tools in the ESG domain. Satellite data holds the potential to fundamentally transform the way we live. Under our new structure, we are committed to delivering more accessible and user-friendly products to society and building a new future together with all of you.
